**To begin** solving the quadratic equation  $x^2 + 8x + 16 = 0$ , I had to factor the expression on the left into two binomials. **Next**, I noted that the first term,  $x^2$ , has a coefficient of 1, **so** I knew that the  $x$  in each factor would have a coefficient of 1. **Subsequently**, I found two numbers with a product of +16 and a sum of +8. **Following those steps**, I was able to factor out  $(x+4)(x+4)$ . **Finally**, I set each factor equal to zero and solved for  $x$ . The solution is  $x$  equals -4.
